Subject: [External] Input for GA76 Freedom of Thought Report

Mr. Ahmed Shaheed and all others concerned,

I was directed to this call for input for an assignment by Dr. Turan Kayaoglu who is teaching a class I am taking at University of Washington on International Human rights. I am a U.S. Army veteran. I was on contract between 2001 and 2013 serving as both Active Army and Reserve. In my initial 4 year enlistment I went to school to become a network switching systems operator at Fort Gordon Georgia. I was educated in communications technology and so when I started hearing voices a decade ago it didn't take me long to figure out that I was being experimented on against my will and various ways that the technology could work. At this point the technology is widespread and being used to read everyone's thoughts and it is being used by surveillance capitalists to exploit us all. Essentially stealing intellectual property and making us slaves. They definitely aren't using it for altruistic purposes, they are developing mind control as a weapon. I am from Seattle, currently living in Tacoma, and so I am sure with all of the tech companies around here that they just took liberties as far as using people to research synthetic telepathy, I know however that the U.S. government is involved and that they've curated a suicide epidemic using psychologically manipulative algorithms and gaslighting in order to keep the technology hidden. I was an activated Army Reservist when it started. If you look up 'DARPA synthetic telepathy funding 2009' you will see what I mean about the U.S. government developing this technology for war, they claimed originally that they were using it to help suicidal veterans, instead we have a for profit industry here in America where 600 veterans kill themselves every month, I'm sure that many of these suicides are over being gaslighted. You would have to be very naive to assume they haven't advanced this technology significantly since making this announcement to the media about DARPA in 2009. If you are hearing about it at all in the media then the technology has already been around for awhile and enough whistleblowers have outed information that they have no choice but to admit to it being real.

If you go on Google and search for 'hearing voices it might be an ad' you will find that the technology has been used in advertising since at least 2007. If you look up 'sound beaming speakers' you will see that it is now a product anyone can get their hands on. They didn't just invent those speakers a few months ago, the technology was developed on unwilling victims such as me. As recently as the beginning of the Trump administration Kellyanne Conway was mocked with "microwaves can't spy on you"... she wasn't talking about cooking food, she was talking about radio waves. I have fought this alone for a decade with a defamation campaign against me by both the government I went to war for and the entire entertainment industry it seems. They pushed me to 4 suicide attempts before I realized that I really don't want to leave the kids in my family to these people with no way to defend themselves.

All of the mass shooters lately have said they heard voices giving them instructions, the people using this technology call it 'voice of god weapon' because they make people believe they are hearing god or angels to try to see how much control they can have over our actions. Another common name is 'voice to skull' or v2k. They are also using it in dream manipulation to play ads in our heads while we sleep. If you look up 'dream glove' you will see it's the same sleep tracking technology that has always been on smart phones. Elon Musk said that language could be replaced as soon as 5 years with this technology. When teenagers in London were

reporting that they were hearing voices the media blamed schizophrenia due to climate change and pollution. People are being told to call anyone who talks about it 'mentally ill'. I have been threatened and sexually harassed and they have harmed people in my family and people around me. It has been a pretty elaborate defamation campaign actually and there has also been religious persecution involved. Even as I write this they are making accusations of me betraying my country using the synthetic telepathy and someone literally just climbed up on the roof of my neighbors house and was looking through my back door that I had open to get some air while working on finals for school. I see no reason to be loyal to such monsters who obviously have no interest in democracy or protecting Americans. I never feel safe. I don't do drugs and I am not a conspiracy theorist, I am a female war veteran and a junior in college. They have been killing us to keep this technology a secret and now suddenly it is a product and they will try to make it something cool that everyone wants and all the people who have been harmed and will be harmed will be disregarded.

I was hearing "we are going to poison your corona" before the virus started. I was told they were going to burn down the office of the chiropractor I go to recently and then they did that. It is always British and American accents... I was poisoned on the same day as the Russians in Britain. It's not Russia, it's not China, it is Britain and America. This is a massive violation of any rights people have to our own mental privacy. I have risked everything to try to protect everyone from this and I hope you will take this seriously. Please see the following link to get an idea of how serious their threats have been. <https://www.facebook.com/TheDOTKU/posts/10157063292563399>

I am glad that I was directed to your call for input because this is a very scary situation that is getting out of our control and the world needs to be aware and fighting this. Really I have a lot more to say about this but I also have a lot of homework to do with finals this week. If you would like to discuss this further please be in contact.
